

2* KITEMARK CYLINDER GUARD

Developed to be very flexible, the Patented UAP cylinder guard can be used with any door handle and is perfectly compatible a majority of locking systems and can be fit in combination with nearly all Euro Cylinders.

The cylinder guard comes with many features not commonly found in other cylinder guards.
The blind end at the front of the cylinder guard hides the cylinder guard screw, so it is extremely hard to locate if someone is trying to drill it out (a common problem on most other cylinder guards).

An anti-rotation axel has also been engineered into the guard, which is rectangle in shape and not circular.
This makes it very hard for people trying to twist the guard apart. Also the curved edges make it very difficult for it to be gripped with mole grips.

The UAP cylinder guard can be used as a good solution for PAS24. With easy fitting and fast results it's a great choice regardless what cylinder is fit onto the door.

Secured by Design

Official Police Security Initiative

Features Include:

- Secured by Design approved
- Blind end anti-drill design body shape to prevent drill attacks
- Unique hardened steel anti-drill plate
- High tensile pointed steel bolt aids assembly and resists drill attacks
- Curved edges stop mole grip attack
- Anti-axial rotation lugs prevents twist attack
- Special grade high strength high impact metal
- Close head tolerance stops screwdriver insertion
