-------	---------

Brown	SJBROWN
-------	---------

The Window Lock (Sash Jammer) can be fitted to uPVC windows and doors which open in or out. It has been designed to prevent the levering of the window sash or door leaf, which is a common burglary technique. Burglars can access uPVC doors and windows by using door spreaders to prise open and lever the window or door open to gain entry. With just a twist of the Window Lock (Sash Jammer) handle, it is secured over the frame, offering resistance to deter forced entry.

Each Window Lock (Sash Jammer) comes with 1mm and 2mm packers, which ensures a secure and stylish fit onto different profiles.

Window Lock (Sash Jammer)

The sash jammer is the perfect fixture if you are concerned with easy to fit, affordable and effective home security measures. Designed for uPVC windows or doors, the sash jammer is installed onto the door or window frame, and when fitted it prevents the levering of either the door or sash leaf of the window. By levering the door or sash leaf, a gap is created allowing access to the lock, but by blocking this movement a home is better protected from this kind of break in method.
