

fullex[®] *Key Wind Lock*

SINGLE DOORS

The Fullex Key Wind lock uses the key or the thumbturn to engage and retract the bolts and the latch. The Fullex Key Wind lock was developed to stop anyone getting in without a key when the door is closed. Our system uses the latch to do this. Once the door is closed you cannot move the latch unless you have a key. If a burglar tried to open the door, say for example if someone has entered the house with

shopping, then they cannot get in. The Fullex Key Wind Lock have minimum key turning with less than a half a turn.

The Fullex Key Wind Lock system offers low maintenance, economic cost and easy to use functionality.

Composite
Doors

Timber
Doors
